

RESILIENCE in ARCHITECTURE and PLANNING

[Sub-themes] RESILIENCE in:

- Building Design
- Vernacular Architecture
- Urban and Regional Planning
- Transport Planning
- Construction Practices and techniques

PREAMBLE

Resilience could be understood as a way of life that enables living beings to recover quickly from natural and man-made difficulties. In the fields of architecture and planning, resilience is the capacity to absorb or evade the effects of disasters without suffering complete failure that aims for a responsive design, conservation and restoration for buildings and infrastructure, as well as communities. This plays a key role in shaping the way we perceive, practice and teach architecture across the globe
