Traditional Indian Architectural Knowledge Systems

Indian subcontinent has been the cradle of one of the richest civilisations due to its diverse geographical, geological and agroclimatic regions. The study of the knowledge systems of India which have emerged as a response to the land, has become more relevant in the contemporary context. These systems are manifested in the form of diverse practices such as art, craft and architecture. Study of Vaastu Shilpa Shastra, Building Energies, Indology, religious studies, shapati traditions and most importantly Indic Knowledge Systems need a rightful representation in the formal architectural education. This program will highlight the theory and practices going on these interdisciplinary domains that supplement the studies of Traditional Indian Architectural Knowledge Systems.
